IMPORTANT PLEASE READ:

- The information, specifications and illustrations in this manual are based on the latest information available at the time of printing. The manufacturer reserves the right to make changes at any time without notice.
- This manual is intended as a guide for service of the valve only. System installation requires information from a number of suppliers not known at the time of manufacture. This product should be installed by a plumbing professional.
- This unit is designed to be installed on potable water systems only.
- This product must be installed in compliance with all state and municipal plumbing and electrical codes. Permits may be required at the time of installation.
- If daytime operating pressure exceeds 80 psi, nighttime pressures may exceed pressure limits. A pressure reducing valve must be installed.
- Do not install the unit where temperatures may drop below 32°F (0°C) or above 125°F (52°C).
- Do not place the unit in direct sunlight. Black units will absorb radiant heat increasing internal temperatures.
- Do not strike the valve or any of the components.
- Warranty of this product extends to manufacturing defects. Misapplication of this product may result in failure to properly condition water, or damage to product.
- A prefilter should be used on installations in which free solids are present.
- In some applications local municipalities treat water with Chloramines. High Chloramine levels may damage valve components.
- Correct and constant voltage must be supplied to the control valve to maintain proper function.

Job Specification Sheet

Job Number: _____

Model Number: _____

Water Test: _____

Capacity Per Unit: _____

Mineral Tank Size: _____ Diameter: _____ Height: _____

Brine Tank Size & Salt Setting per Regeneration: _____

9000/9100/9500 Control Valve Specifications:

1. **Type of Timer:**

- A. 82 minute available regeneration time, 1/15 RPM
- B. 164 minute available regeneration time, 1/30 RPM

2. **Type of Meter:**

Mechanical Valves (Gallon Settings)

Meter	Standard Range	Extended Range
3/4"	125 - 2,125	625 - 10,625
1"	310 - 5,270	1,150 - 26,350
1-1/2"	625 - 10,625	3,125 - 53,125

3. Timer Gallon Setting: _____ Gallons

4. Regeneration Program Setting:

- A. Backwash: _____ Minutes
- B. Brine and Slow Rinse: _____ Minutes
- C. Rapid Rinse: _____ Minutes
- D. Brine Tank Refill: _____ Minutes

5. Drain Line Flow Control: _____ gpm

6. Brine Refill Rate: _____ gpm

7. Injector Size: _____

Equipment Configuration

9000/9100 Equipment Configuration

9500 Equipment Configuration

General and Commercial Installation Checklist

1. Place the softener tank where you want to install the unit.

NOTE: Be sure the tank is level and on a firm base.

2. During cold weather it is recommended that the installer warm the valve to room temperature before operating.
3. Perform all plumbing according to local plumbing codes.
 - Use a 1/2" minimum pipe size for the drain.
 - Use a 3/4" drain line for backwash flow rates that exceed 7 gpm or length that exceeds 20' (6 m).
4. Both tanks must be the same height and diameter and filled with equal amounts of media.
5. The distributor tube must be flush with the top of each tank. Cut if necessary. Use only non-aerosol silicone lubricant.
6. Lubricate the distributor o-ring seal and tank o-ring seal. Place the main control valve on one tank and the tank adapter on the second tank.

NOTE: If required, solder copper tubing for tank interconnection before assembling on the main control valve and tank adapter. Maintain a minimum of 1" distance between tanks on final assembly.
7. Solder joints near the drain must be done before connecting the Drain Line Flow Control fitting (DLFC). Leave at least 6" (152 mm) between the DLFC and solder joints when soldering pipes that are connected on the DLFC. Failure to do this could cause interior damage to DLFC.
8. Use only Teflon tape on the drain fitting.
9. Be sure the floor under the salt storage tank is clean and level.
10. Place approximately 1" (25 mm) of water above the grid plate. If a grid is not utilized, fill to the top of the air check in the salt tank. Do not add salt to the brine tank at this time.
11. On units with a bypass, place in Bypass position.
 - Turn on the main water supply.
 - Open a cold soft water tap nearby and let water run a few minutes or until the system is free of foreign material (usually solder) resulting from the installation. Close the water tap when water runs clean.
12. Place the bypass In Service position and let water flow into the mineral tank. When water flow stops, slowly open a cold water tap nearby and let water run until air is purged from the unit. Then close tap.

Electrical

13. Make all electrical connections according to codes. Plug the valve into an approved power source. Do not insert meter cable into the meter yet.
14. Tank one has control valve and tank two has adapter.
15. Look on the right side of the control valve, it has indicators showing which position the control valve is in during Regeneration and which tank is In Service.

NOTE: Make sure the meter cable is not inserted in the meter dome. Swing the timer out to expose the program wheel (to swing timer out) grab onto the lower right corner of timer face and pull outward.

General and Commercial Installation Checklist

Control Valve Position Indicators

Timer

Program Wheel

16. Cycle timer into backwash position. Turn manual knob so that the micro switch rides on the first set of pins.
 - In this position the tanks switch (lower piston) and the control valve moves to the backwash position (upper piston).
 - Wait until the positioning of upper and lower pistons stops before advancing the timer further. If advanced too fast the control will not home into the In Service position (it will not advance to any other position). To correct this, rotate the manual knob back to In Service and start again into backwash.
- NOTE:** Once valve positions itself into the backwash cycle, the homing circuit locks in.
17. With all the air backwashed, slowly cycle the timer to the brine position; rapid rinse; and brine tank refill. Wait for the control drive motor to position itself in each cycle and stop, before advancing on to the next position.
18. Once back in the In Service position, cycle the control valve again into the backwash position. The tanks switch again, and air head backwashes out of the other tank. Cycle the control back to the In Service position. Leave the timer in the open position. **DO NOT** insert meter cable yet.

NOTE: Two motors are available.

1/15 RPM has 82 minute regeneration time.

1/30 RPM has 164 minute regeneration time.

General and Commercial Installation Checklist

WATER PRESSURE: A minimum of 25 pounds of water pressure is required for regeneration valve to operate effectively.

ELECTRICAL FACILITIES: A continuous 115 volt, 60 Hertz current supply is required. Make certain the current supply is always hot and cannot be turned off with another switch.

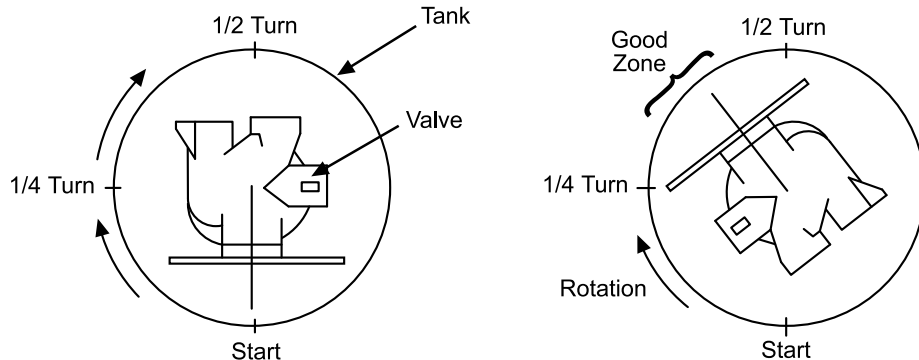

EXISTING PLUMBING: Condition of existing plumbing should be free from lime and iron buildup. Piping that is built up heavily with lime and/or iron should be replaced. If piping is clogged with iron, a separate iron filter unit should be installed ahead of the water softener.

LOCATION OF SOFTENER AND DRAIN: The softener should be located close to a drain.

BY-PASS VALVES: Always provide for the installation of a by-pass valve.

Valve to Tank Installation Instructions

1. Spin the valve onto the tank, ensuring the threads are not cross-threaded.
NOTE: All Fleck® valves are right-hand threads, or clockwise, to install
2. Rotate the valve freely without using force until it comes to a stop (this position is considered zero).
3. Rotate the valve clockwise from zero, between ¼ turn and ½ turn (see the diagram below).

NOTE: If lubricant is required, a silicone compound is strongly recommended. Dow Corning® Silicone Compound (available from Fleck®), is recommended for best possible results. Dow Corning® 7 Release Compound is used in the manufacture of Fleck® control valves. The use of other types of lubricants may attack the control's plastic or rubber components. Petroleum-based lubricants can cause swelling in rubber parts, including o-rings and seals.

Part No.	Description
16174	Silicone, 2 oz Tube
16586-8	Silicone, Dow #7 8 LB

CAUTION

- Do Not Exceed Water Pressure of 125 psi.
- Do Not Exceed 110° F.
- Do Not Subject Unit to Freezing Conditions.

Regeneration Cycle Program Setting Procedure

Setting the Regeneration Cycle Program

The Regeneration cycle program on the water conditioner is preset at the factory. However, portions of the cycle or program time may be lengthened or shortened for local conditions or system design.

1. Expose cycle program wheel by grasping timer in lower right hand corner and pulling. This releases snap retainer and swings timer to the left
NOTE: Meter cable must be removed from meter dome before opening timer.
2. Remove the program wheel by grasping program wheel and squeezing protruding lugs towards center. Lift program wheel off timer.
 - Switch arms may require movement to facilitate removal.
3. Return timer to closed position by engaging snap retainer in back plate.
 - Make certain all electrical wires locate above snap retainer post.

Changing Length of the Backwash Time

Looking at the numbered side of the program wheel, the group of pins starting at zero determines the length of time the unit backwashes.

Example: If there are six pins in this section, the time of backwash is 12 minutes (2 minutes per pin). To change the length of backwash time, add or remove pins as required.

- The number of pins multiplied by two equals minutes of backwash.

Changing Length of Brine and Rinse Time

The group of holes between the last pin in the backwash section and the second group of pins determines the length of time that a unit will brine and rinse (2 minutes per hole).

To change the length of brine and rinse time, add or remove pins in the rapid rinse group of pins to increase or decrease the number of holes in the brine and rinse section.

- The number of holes multiplied by two equals minutes of brine and rinse.

Changing Length Of Rapid Rinse

The second group of pins on the program wheel determines the length of time the water conditioner rapid rinses (2 minutes per pin). To change the length of rapid rinse time, add or remove pins at the higher numbered end of this section as required.

- The number of pins multiplied by two equals minutes of rapid rinse.

NOTE: Program wheels with 0–82 minute cycle times, use one minute per pin or hole to set Regeneration times. The layout of pins and holes on the program wheel follow the same procedure as on this page.

Changing Length of Brine Tank Refill Time

The second group of holes on the program wheel determines the length of time the water conditioner refills the brine tank (2 minutes per hole).

To change the length of refill time, move the two pins at the end of the second group of holes as required.

The Regeneration cycle is complete when the two pin set at end of the brine tank refill section trips the outer micro-switch. The program wheel, however, continues to rotate until the inner micro-switch drops into the notch on the program wheel.

Programming

1. The control valve is set at the factory for backwash; brine and slow rinse; rapid rinse and brine tank fill times. Change any of these times by repositioning the pins and holes or adding more pins.

NOTE: Two speed timer motors are available

1/15 RPM has 82 minute Regeneration Time and each pin or hole equals one minute.

1/30 RPM has 164 minute Regeneration Time and each pin or hole equals two minutes.

Time Brine Refill and Meter Setting Procedure

2. The control valve has a separate brine tank fill cycle.
- Calculate the desired salt setting using the brine line flow control rate of refill (in gpm) multiplied by the timer setting. Then, using one gallon of fresh water dissolving approximately 3 lbs salt, calculate the refill time.

Example: A desired 30 lbs salt setting:

The unit has a 1.0 gpm refill rate so a 10 gallon fill is required.

$$10 \text{ gallons} \times 3 \text{ lbs/gals} = 30 \text{ lbs salt}$$

Set the timer refill section at 10 minutes.

$$10 \text{ minutes} \times 1.0 \text{ gpm} = 10 \text{ gallon fill}$$

NOTE: There must always be two pins at the end of a refill time to stop the fill cycle. With the Regeneration times set, place timer back to its original position, making sure the lower right hand corner snaps back into the backplate and the meter cable slides through the backplate and does not bind.

3. Setting the gallon wheel.

Knowing the amount of resin in each tank and the salt setting per Regeneration, calculate the gallons available, using the following capacities as a guide:

$$\frac{(\text{capacity per ft}^3 \times \text{ft}^3 \text{ of resin per tank})}{\text{compensated hardness of H}_2\text{O}} = \text{gallons available}$$

NOTE: Based on tank size:

More resin increases capacity, less resin decreases capacity.

More salt increases capacity, less salt decreases capacity.

Example:

Tank Diameter	=	16"
Compensated Hardness	=	35 grains per gallon (tested sample)
ft ³ Resin (based on flow rate)	=	4
lbs of Salt	=	8
Capacity per ft ³	=	24,000

$$\frac{(24,000 \times 4 \text{ ft}^3 \text{ of resin per tank})}{35 \text{ grains}} = 2,740 \text{ gallons available before regeneration}$$

DO NOT SET THIS FIGURE - GO TO STEP 4

- Because the control valve regenerates with soft water from the other tank, subtract the water used for regeneration. Take each regeneration cycle and calculate the water used.

Example: Unit is set for a 16" diameter tank with 4 ft³ of resin and salted at 8 lbs. per ft³, 7 gpm backwash, #3 injector, 1.0 gpm brine refill, and 60 psi and timer set for 10 min. backwash, 60 min. brine and rinse, 10 min. rapid rinse, 10 min. brine tank fill.

Backwash	10 minutes x 7.0 gpm =	70.0 gallons
Brine and Rinse	60 minutes x 1.0 gpm =	60.0 gallons
Rapid Rinse	10 minutes x 7.0 gpm =	70.0 gallons
Brine Tank Fill	10 minutes x 1.0 gpm =	10.0 gallons
Total Regeneration Water =		210.0 gallons

With the 2740 gallons available calculated in Step 3, subtract the Regeneration water used from the total water available.

2740 gallons available - 210 gallons used = 2530 gallons
(in Regeneration, Step 4)

Time Brine Refill and Meter Setting Procedure

4. Set meter wheel at approximately 2530 gallons. Lift the inner dial of the meter program wheel so that you can rotate it freely. Position the white dot opposite the 2530 gallon setting.

NOTE: There is a slight delay between the time the meter zeros out and the cycle starts. Units using the:

1/15 RPM motor, 82 minute Regeneration Time has a 9 minute delay

1/30 RPM motor, 180 minute Regeneration Time has an 18 minute delay.

NOTE: This delay period is not critical on residential equipment. However, take this factor into consideration for commercial applications by subtracting continuous flows for 9 minutes or 18 minutes from water available.

5. Insert meter cable into meter.
6. Check bypass.
7. Plug in unit.

Troubleshooting

Problem	Cause	Correction
1. Water conditioner fails to regenerate.	A. Electrical service to unit has been interrupted	A. Assure permanent electrical service (check fuse, plug, pull chain, or switch)
	B. Timer is defective.	B. Replace timer.
	C. Power failure.	C. Reset time of day.
2. Hard water.	A. By-pass valve is open.	A. Close by-pass valve.
	B. No salt is in brine tank.	B. Add salt to brine tank and maintain salt level above water level.
	C. Injector screen plugged.	C. Clean injector screen.
	D. Insufficient water flowing into brine tank.	D. Check brine tank fill time and clean brine line flow control if plugged.
	E. Hot water tank hardness.	E. Repeated flushings of the hot water tank is required.
	F. Leak at distributor tube.	F. Make sure distributor tube is not cracked. Check O-ring and tube pilot.
	G. Internal valve leak.	G. Replace seals and spacers and/or piston.
3. Unit used too much salt.	A. Improper salt setting.	A. Check salt usage and salt setting.
	B. Excessive water in brine tank.	B. See problem 7.
4. Loss of water pressure.	A. Iron buildup in line to water conditioner.	A. Clean line to water conditioner.
	B. Iron buildup in water conditioner.	B. Clean control and add mineral cleaner to mineral bed. Increase frequency of regeneration.
	C. Inlet of control plugged due to foreign material broken loose from pipes by recent work done on plumbing system.	C. Remove piston and clean control.
5. Loss of mineral through drain line.	A. Air in water system.	A. Assure that well system has proper air eliminator control. Check for dry well condition.
	B. Improperly sized drain line flow control.	B. Check for proper drain rate.
6. Iron in conditioned water.	A. Fouled mineral bed.	A. Check backwash, brine draw, and brine tank fill. Increase frequency of regeneration. Increase backwash time.
7. Excessive water in brine tank.	A. Plugged drain line flow control.	A. Clean flow control.
	B. Plugged injector system.	B. Clean injector and screen.
	C. Timer not cycling.	C. Replace timer.
	D. Foreign material in brine valve.	D. Replace brine valve seat and clean valve.
	E. Foreign material in brine line flow control.	E. Clean brine line flow control.

Problem	Cause	Correction
8. Softener fails to draw brine.	A. Drain line flow control is plugged.	A. Clean drain line flow control.
	B. Injector is plugged.	B. Clean injector
	C. Injector screen plugged.	C. Clean screen.
	D. Line pressure is too low.	D. Increase line pressure to 20 P.S.I.
	E. Internal control leak	E. Change seals, spacers, and piston assembly.
	F. Service adapter did not cycle.	F. Check drive motor and switches.
9. Control cycles continuously.	A. Misadjusted, broken, or shorted switch.	A. Determine if switch or timer is faulty and replace it, or replace complete power head.
10. Drain flows continuously.	A. Valve is not programming correctly.	A. Check timer program and positioning of control. Replace power head assembly if not positioning properly.
	B. Foreign material in control.	B. Remove power head assembly and inspect bore. Remove foreign material and check control in various regeneration positions.
	C. Internal control leak.	C. Replace seals and piston assembly.

General Service Hints For Meter Control

Problem: Softener delivers hard water

Reason: Reserve capacity has been exceeded.

Correction: Check salt dosage requirements and reset program wheel to provide additional reserve.

Reason: Program wheel is not rotating with meter output.

Correction: Pull cable out of meter cover and rotate manually. Program wheel must move without binding and clutch must give positive clicks when program wheel strikes regeneration stop. If it does not, replace timer.

Reason: Meter is not measuring flow.

Correction: Check meter with meter checker.

Service Assemblies

Brine Line Flow Controls (9000/9100):

60022-12	BLFC, .125 GPM, 5000/5600/9000/9100
60022-25	BLFC, .25 GPM, 5000/5600/9000/9100
60022-50	BLFC, .50 GPM, 5000/5600/9000/9100
60022-100	BLFC, 1.0 GPM, 5000/5600/9000/9100
60350	Brine Valve Assy, 9000/9100

Brine Line Flow Controls (9500):

60020-25	BLFC, .25 GPM, 1600
60020-50	BLFC, .50 GPM, 1600
60020-100	BLFC, 1.0 GPM, 1600

Brine Valve Assemblies:

60037-610	Brine Valve, 9500/1600, .25 GPM, Cold & HW 180°
60037-620	Brine Valve, 9500/1600, .50 GPM, Cold & HW 180°
60037-630	Brine Valve, 9500/1600, 1.0 GPM, Cold & HW 180°
60350	Brine Valve Assy 9000/9100, Cold & HW 180°
60350-01	Brine Valve Assy, 9000/9100/Twinfl100, Cold & HW 180°

1700 Brine Valve Assemblies (9500):

60039-XX	Brine Valve, 1700/9500, Cold & HW 180°

60611-01NP	Meter, 2850/9500, 1" Sleeve, NP 1 1/2" Std Meter
60611-02	Meter, 2850/9500, 1" Sleeve, 1 1/2" Ext Meter
60611-02NP	Meter, 2850/9500, 1" Sleeve, NP 1 1/2" Ext Meter
17790	Sleeve, Meter, 1 1/2" x 1" (NOTE: when reducing a 1-1/2" meter to a 1" meter, the program wheel and timer settings must be changed to a 1" meter size)

Service Assemblies

Meter Checker Kits:

60460	Meter Checker Kit, Std
60461	Meter Checket Kit, Ext

Piston Assemblies:

60108	Piston Assy, 9500, Upper
60108-01	Piston Assy, 9500, Upper, HW 180°
60109	Piston Assy, 9500, Lower
60109-01	Piston Assy, 9500, Lower HW, 180°
60400	Piston Assy, 9000/9100, Top
60400-01	Piston Assy, 9000/9100, HW Upper, 180°
60401	Piston Assy, 9000/9100, Lower
60401-01	Piston Assy, 9000/9100 Lower, HW 180°

Seal & Spacer Kits:

60125	Seal & Spacer Kit, 5600/9000 Top
60125-20	Seal & Spacer Kit, Top, 559 PE Cold and Chloramine
60125HW	Seal & Spacer Kit, 9000/9100, Upper HW 180°
60133	Seal & Spacer Kit, 9500, Lower, Cold & HW 180°
60133-20	Seal & Spacer Kit, 9500, Lower
60133-30	Seal & Spacer Kit, 9500, Lower
60134	Seal & Spacer Kit, 9500, Upper, Cold & HW 180°
60134-20	Seal & Spacer Kit, 9500, Upper
60134-30	Seal & Spacer Kit, 9500, Upper
60421	Seal & Spacer Kit, 9000/9100, Bottom
60421-20	Seal & Spacer Kit, 9000/9100, Bottom 559PE
60421HW	Seal & Spacer Kit, 9000/9100, Bottom, HW 180°

Second Tank Assemblies (9000):

14202-01	Screw, Hex Wsh Mach, 8-32 x 5/16 18-8 S.S.
13255	Clip, Mounting
15078-01	Adapter Assy, 1" Coupling
14864-01	Adapter, 9000/9100, 2nd Tank, Machd w/O-rings
14864-01NP	Adapter, 9000/9100, 2nd Tank, Machd, NP
15823-06	Yoke Assy, 6" Tank & 6" Tube
15823-06NP	Yoke Assy, 6" Tank, NP 6" Tubes
15823-12	Yoke Assy, 6" - 12" Tank, 8 1/2 Tube
15823-12NP	Yoke Assy, 6" - 12" Tank, NP 8 1/2" Tubes
15823-14	Yoke Assy, 14" Tank, 10 1/2" Tube
15823-14NP	Yoke Assy, 14" Tank, NP 10 1/2" Tube
15823-16	Yoke Assy, 16" Tank, 12 1/2" Tube
15823-16NP	Yoke Assy, 16" Tank, NP 12 1/2" Tube

Second Tank Assemblies (9100):

60425-12	Tube Assy, 9100, 6-12" Tanks
60425-16	Tube Assy, 9100, 13-16" Tanks
14865	Adapter Assy, 2nd Tank, 9100
61419	Kit, 1.05" Distributor Adapter

Second Tank Assemblies (9500):

16919-01	Valve Body, 9500 Machd
16919-01NP	Valve Body, 9500 Machd, NP
16919-21	Valve Body, 9500 BSP, Mtrc, Machd
16919-21NP	Valve Body, 9500 BSP, Mtrc, Machd Nickel Plated
60715-16	Tube Assy, 9500, 2nd Tank for 14" to 16" Tanks
60715-16NP	Tube Assy, 9500, 2nd Tank, NP for 14" to 16" Tanks
60715-20	Tube Assy, 9500, 2nd Tank for 20" Tanks
60715-24	Tube Assy, 9500, 2nd Tank for 20" and 24" Tanks
60715-24NP	Tube Assy, 9500, 2nd Tank, Nickel for 20-24" Tanks

Tools:

12763	Stuffer Tool Assy, 5600/9000
13061	Puller Assy, Port Ring
13759	Tool, DLFC Retainer

Valve Body Assembly (9100):

40688	Valve Body Assy, 9100
18303	O-ring, -336
18569	Retainer, Tank Seal

Notes
